

Design System — WGI Commission Module

Scope

This document covers `app/commission/**` and `components/commission/**` only. For hub-wide tokens and the Model Portfolio module, see `DESIGN.md`.

Product Context

- **What this is:** Finance ops back-office for Wynn Global admins (9 admin workflows) and IFAs (self-service portal). Tracks commission records from upload through approval and payment.
- **Who it's for:** WGI ops admins who process commissions; IFAs who check their balance and statements.
- **Space/industry:** Insurance-linked wealth management — commission operations.
- **Project type:** Authenticated internal tool / admin dashboard.
- **Memorable thing:** Every dollar is accounted for. Credibility + operational speed + institutional authority — all three equally. Nothing decorative competes with the data.
- **Scope note:** Reuses all WGI brand tokens. Commission-scoped tokens are prefixed `--cm-*` to avoid collisions.

Aesthetic Direction

- **Direction:** Industrial/Utilitarian finance ops — dense, scannable, audit-grade
- **Decoration level:** Minimal — no hero panels, no decorative gradients, no icon grids
- **Mood:** Every visual choice signals "this is where real money is tracked." White surfaces, navy structure, gold accent reserved for active state only. Feels like a bank's internal system — familiar to anyone who's used Bloomberg or Salesforce FSC.
- **Reference:** Bloomberg Terminal (density + authority), Salesforce Financial Services Cloud (workflow structure), WGI Model Portfolio `DESIGN.md` (brand tokens)

Information Architecture

Admin shell (`/commission/admin/**`)

Two-tier navigation:

1. Hub header (shared): WGI 360 logo + module switcher + user avatar
2. Commission secondary nav (flat underline tabs): Dashboard · Master File · Upload · Approvals · Payments · Payment Matrix · KPI · Unmapped · Audit Log

No sidebar. The admin workflows are a linear sequence (upload → approve → pay), not a browseable hierarchy.

IFA portal (`/commission/ifa`)

Simplified centered layout. Same tokens, wider breathing room. No secondary nav — single-page with tab bar (Transactions · Payments · APE Summary).

Page types

Route	Pattern
/commission/admin	Alert banners + stat strip + charts
/commission/admin/master-file	Full-width ag-grid with filter toolbar
/commission/admin/upload	Step-based form + CSV preview table
/commission/admin/approvals	Filterable table + bulk select + action bar
/commission/admin/payments	IFA summary cards + payment modal
/commission/admin/payment-matrix	Rules grid + establishment period editor
/commission/admin/kpi	KPI cards + bar/line charts + period switcher
/commission/admin/unmapped	Alert list + inline IFA assign dropdown
/commission/admin/audit-log	Filterable timeline table + diff viewer
/commission/ifa	Balance strip + tab bar + transaction table

Typography

Raleway is the WGI brand font, already loaded globally. JetBrains Mono is added for monetary and identifier values in the commission module.

Loading: Add to root layout or commission layout:

```
<link href="https://fonts.googleapis.com/css2?
family=JetBrains+Mono:wght@400;500&display=swap" rel="stylesheet">
```

(Raleway is already loaded hub-wide.)

Role	Font	Size	Weight	Notes
Page heading	Raleway	18px	700	navy #1B2D45
Section label / tab	Raleway	12px	600	uppercase, letter-spacing 0.06em, muted
Table header	Raleway	10px	700	uppercase, letter-spacing 0.1em, white on navy header
Stat card value	Raleway	22px	700	navy; monetary values use JetBrains Mono at 18px
Stat card label	Raleway	10px	600	uppercase, letter-spacing 0.1em, muted
Table body / form label	Raleway	12px	500	#1A202C
Monetary cell	JetBrains Mono	12px	400	font-variant-numeric: tabular-nums always

Role	Font	Size	Weight	Notes
Policy number / IFA code / ref	JetBrains Mono	11px	400	muted #64748B
Badge / action label	Raleway	10px	700	uppercase, letter-spacing 0.06em

Typography rationale

- Raleway is the established WGI brand font — consistency across hub modules.
- JetBrains Mono for monetary and identifier values: column alignment is a financial accuracy signal. Bloomberg, Reuters, and every serious trading terminal use monospaced numerals. It also visually distinguishes data cells from label cells without color alone.

Color

WGI brand tokens (inherited — do not redefine)

These are defined in `app/globals.css` and apply hub-wide. Commission pages use them directly.

Token	Hex	Usage in Commission
<code>--wgi-navy</code>	<code>#1B2D45</code>	ag-grid header, page headings, primary buttons, stat values, tab active text
<code>--wgi-gold</code>	<code>#C8A96E</code>	Active tab underline (3px), ag-grid column resize handle, cell-dirty left border, input focus ring
<code>--wgi-bg</code>	<code>#F8FAFC</code>	Page canvas, ag-grid row hover, chart card background
<code>--wgi-surface</code>	<code>#FFFFFF</code>	Stat strip, chart cards, table surface, modals
<code>--wgi-border</code>	<code>#E2E8F0</code>	All borders: table rules, card outlines, input default
<code>--wgi-text</code>	<code>#1A202C</code>	Table body, primary labels
<code>--wgi-text-muted</code>	<code>#64748B</code>	Secondary labels, chart axis, muted cell values
<code>--wgi-text-light</code>	<code>#94A3B8</code>	Stat sub-label, placeholder text

Commission-scoped tokens (add to `app/globals.css`)

```
:root {
  /* Status badge tokens */
  --cm-status-pending-bg: #FEF3C7;
  --cm-status-pending-text: #78350F;
  --cm-status-approved-bg: #D1FAE5;
  --cm-status-approved-text: #065F46;
  --cm-status-rejected-bg: #FEE2E2;
  --cm-status-rejected-text: #7F1D1D;
  --cm-status-paid-bg: #E8EDF3;
```

```

--cm-status-paid-text:      #1B2D45;
--cm-status-suspended-bg:  #F5F3FF;
--cm-status-suspended-text:#4C1D95;
--cm-status-advance-bg:    #FFF7ED;
--cm-status-advance-text:  #9A3412;

/* Alert banner tokens */
--cm-alert-warning-bg:     #FFF7ED;
--cm-alert-warning-border: #F59E0B;
--cm-alert-warning-text:   #92400E;
--cm-alert-critical-bg:    #FEF2F2;
--cm-alert-critical-border:#EF4444;
--cm-alert-critical-text:  #7F1D1D;

/* Chart palette – replaces current rainbow */
--cm-chart-1: #1B2D45; /* wgi-navy */
--cm-chart-2: #C8A96E; /* wgi-gold */
--cm-chart-3: #3D6898; /* navy-400 */
--cm-chart-4: #7B96B2; /* slate-blue */
--cm-chart-5: #8C7355; /* warm brown */
--cm-chart-6: #A3B8CC; /* lightest blue-slate */

/* Finance semantic (shared with Model Portfolio) */
--cm-gain: #00873E;
--cm-loss: #CC0000;
}

```

Color rationale

Status badges: Warm amber for pending (not urgent but needs action), green for approved, red for rejected, navy for paid (settled — authoritative, not celebratory), purple for suspended (genuinely unusual state — the one place a non-navy/gold color is justified), orange-brown for advance (structurally different from a regular transaction).

Chart palette: The current rainbow (#3B82F6, #10B981, #F59E0B, #8B5CF6, #EF4444, #06B6D4) makes charts feel like a startup marketing deck. The navy-anchored desaturated palette reads as designed, not defaulted.

Action buttons: Navy primary — not blue. Blue (--wgi-accent) is reserved for external links. Using blue for buttons would create false visual hierarchy against the blue-ish chart series colors.

Anti-patterns to avoid

- Rainbow fills for chart series (use --cm-chart-*)
- Tailwind semantic badge classes (bg-green-100 text-green-800) — use --cm-status-* tokens
- Blue (--wgi-accent) for primary buttons
- Red fill buttons for "Reject" — reject is a secondary action (white bg, red text only)
- Color-coding buttons by operation type (approve=green, reject=red, etc.)

Status Badge Component

```
// components/commission/StatusBadge.tsx
const STATUS_CLASSES: Record<string, string> = {
  pending: 'bg-[var(--cm-status-pending-bg)] text-[var(--cm-status-pending-text)]',
  approved: 'bg-[var(--cm-status-approved-bg)] text-[var(--cm-status-approved-text)]',
  rejected: 'bg-[var(--cm-status-rejected-bg)] text-[var(--cm-status-rejected-text)]',
  paid: 'bg-[var(--cm-status-paid-bg)] text-[var(--cm-status-paid-text)]',
  suspended: 'bg-[var(--cm-status-suspended-bg)] text-[var(--cm-status-suspended-text)]',
  advance: 'bg-[var(--cm-status-advance-bg)] text-[var(--cm-status-advance-text)]',
}

export function StatusBadge({ status }: { status: string }) {
  const key = status.toLowerCase().replace(/^[^a-z]/g, '')
  return (
    <span className={`inline-flex items-center px-2 py-0.5 rounded text-[10px] font-bold tracking-[0.06em] uppercase ${STATUS_CLASSES[key] ?? 'bg-gray-100 text-gray-700'}`}>
      {status}
    </span>
  )
}
```

ag-Grid Theme Override

The master file uses `ag-theme-alpine`. Override with WGI tokens in `app/globals.css` (or a commission-scoped CSS file):

```
.ag-theme-alpine {
  /* Header */
  --ag-header-background-color: var(--wgi-navy);
  --ag-header-foreground-color: rgba(255, 255, 255, 0.85);
  --ag-header-column-resize-handle-color: rgba(200, 169, 110, 0.6); /* gold */
  --ag-header-column-separator-color: rgba(255, 255, 255, 0.1);

  /* Rows */
  --ag-background-color: var(--wgi-surface);
  --ag-odd-row-background-color: var(--wgi-surface);
  --ag-row-hover-color: var(--wgi-bg);
  --ag-selected-row-background-color: #EEF3F9;

  /* Borders */
  --ag-border-color: var(--wgi-border);
  --ag-cell-horizontal-border: solid var(--wgi-border);
  --ag-borders: solid var(--wgi-border);
  --ag-borders-critical: solid var(--wgi-border);
}
```

```
/* Inputs / editing */
--ag-input-focus-border-color: var(--wgi-gold);
--ag-range-selection-border-color: var(--wgi-navy);

/* Typography */
--ag-font-family: 'Raleway', sans-serif;
--ag-font-size: 12px;

/* Density */
--ag-row-height: 32px;
--ag-header-height: 36px;
--ag-cell-horizontal-padding: 12px;
}

/* Dirty/unsaved cell: gold left border + warm background tint */
.ag-cell.cell-dirty {
  border-left: 2px solid var(--wgi-gold) !important;
  background: #FFFBF4 !important;
}
```

Note: `ag-theme-quartz` (ag-grid v32+) has better CSS variable support. If upgrading, prefer it over Alpine.

Layout

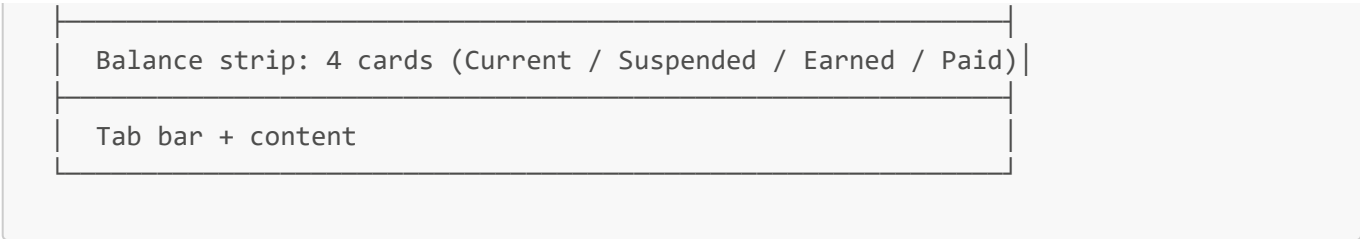

Admin shell

Hub header: WGI 360 Model Portfolio Commission ...	48px, wgi-navy bg
Commission nav: Dashboard Master File Upload ...	40px, white bg, gold underline active
[Alert banners – conditional]	auto height
[Stat strip – 4 columns]	~72px
Page content (full-width or grid)	flex-1

- **Max width:** none on admin (full viewport — grids need it)
- **Content padding:** 20px 24px horizontal

IFA portal

Hub header
IFA header: name + IFA code + export buttons

- **Max width:** `max-w-5xl` centered (IFA portal has no grid; comfortable reading width)
- **Content padding:** `24px`

Tab bar (shared pattern)

Identical to Model Portfolio tab bar:

- Underline tabs, not pills
- Active: `--wgi-navy` text + **3px `--wgi-gold` bottom border**
- Inactive: `--wgi-text-muted` text, transparent border
- Height: 40px, font Raleway 600 12px

Stat strip / admin dashboard

- 4-column grid, no gap between cells (internal `border-right` dividers)
- Card padding: `16px 24px`
- **Alert card modifier:** `border-left: 3px solid --cm-alert-critical-border` for unmapped/negative-balance counts
- **Warning card modifier:** `border-left: 3px solid --cm-alert-warning-border` for pending-approval sums

Alert banners

Stacked below the commission nav, above the stat strip. Non-blocking — page still loads.

Level	Background	Border	When
Critical	<code>--cm-alert-critical-bg</code>	<code>--cm-alert-critical-border</code> left+bottom 1px	Unmapped policies blocking payout
Warning	<code>--cm-alert-warning-bg</code>	<code>--cm-alert-warning-border</code> left+bottom 1px	Negative balance IFAs

Structure: `icon + bold label + description + [CTA button]` — CTA is white bg, current-color border, uppercase Raleway 11px.

Dashboard charts

Two-column on `lg+` (`1fr 340px`): main bar chart left, platform pie/legend right.

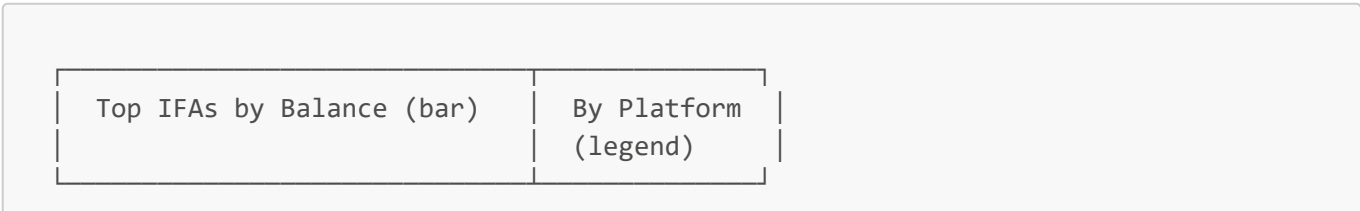

Chart cards: white surface, `--wgi-border` border, `border-radius: 4px`. Header: `--wgi-bg` bg, uppercase label + optional action button. Body: `16px` padding.

Spacing

- **Base unit:** 4px
- **Density:** Compact (finance ops — maximize data on screen)
- **ag-grid row:** 32px height, 36px header
- **Table row padding:** 9px 12px
- **Stat card padding:** 16px 24px
- **Section content padding:** 20px 24px
- **Chart gap:** 20px
- **Balance card gap (IFA portal):** 12px

Scale	Value	Usage
2xs	2px	Icon gap, inner badge padding
xs	4px	Tight row gap
sm	8px	Button gap, badge padding horizontal
md	12px	IFA balance card gap
lg	16px	Section header padding, stat card
xl	20px	Content padding, chart gap
2xl	24px	Content horizontal padding
3xl	32px	Section vertical padding

Motion

- **Approach:** Minimal-functional — only transitions that aid comprehension
- **Row hover:** 120ms ease-out
- **Tab underline:** 150ms ease-in-out
- **No entrance animations** on table rows or stat cards
- **Skeleton loaders** (not spinners) for data loading states — `--wgi-bg` base + `--wgi-border` shimmer
- **Modal open:** 150ms ease-out, fade + slight scale from 0.97

Components

CommissionLayout (shell)

```
// app/commission/layout.tsx – already handles auth
// The admin secondary nav belongs in app/commission/admin/layout.tsx
```

Secondary nav implementation pattern:

```
const ADMIN_TABS = [
  { href: '/commission/admin',          label: 'Dashboard' },
  { href: '/commission/admin/master-file', label: 'Master File' },
  { href: '/commission/admin/upload',    label: 'Upload' },
  { href: '/commission/admin/approvals', label: 'Approvals' },
  { href: '/commission/admin/payments',  label: 'Payments' },
  { href: '/commission/admin/payment-matrix', label: 'Payment Matrix' },
  { href: '/commission/admin/kpi',       label: 'KPI' },
  { href: '/commission/admin/unmapped',  label: 'Unmapped' },
  { href: '/commission/admin/audit-log',  label: 'Audit Log' },
]

// Tab: active when pathname starts with href (exact for dashboard)
// Active class: text-[var(--wgi-navy)] border-b-[3px] border-[var(--wgi-gold)]
// Inactive: text-[var(--wgi-text-muted)] border-b-transparent
```

StatusBadge

See code in [Color > Status Badge Component](#) above.

Replaces inline Tailwind semantic classes in:

- [app/commission/admin/audit-log/page.tsx](#) — ACTION_COLOURS map
- [app/commission/admin/approvals/page.tsx](#) — status column
- [app/commission/admin/master-file/page.tsx](#) — status column
- [app/commission/admin/payments/page.tsx](#) — payment status

AlertBanner

```
// components/commission/AlertBanner.tsx
type AlertLevel = 'warning' | 'critical'

const STYLES: Record<AlertLevel, string> = {
  warning: 'bg-[var(--cm-alert-warning-bg)] border-[var(--cm-alert-warning-border)] text-[var(--cm-alert-warning-text)]',
  critical: 'bg-[var(--cm-alert-critical-bg)] border-[var(--cm-alert-critical-border)] text-[var(--cm-alert-critical-text)]',
}

export function AlertBanner({ level, children, cta, onCta, onDismiss }: Props) {
  return (
    <div className={`flex items-center gap-3 px-6 py-2.5 text-xs font-semibold border-b-${STYLES[level]}`>
      <span>{level === 'critical' ? '⚠' : '!'}</span>
      <span>{children}</span>
      {cta && <button onClick={onCta} className="ml-auto border border-current px-2.5 py-0.5 rounded text-[11px] font-bold uppercase tracking-wider">{cta}</button>}
    </div>
  )
}
```

StatCard

```
// components/commission/StatCard.tsx
type StatVariant = 'default' | 'warning' | 'alert'

export function StatCard({ label, value, sub, variant = 'default', mono = false }:
Props) {
  const borderClass = {
    default: '',
    warning: 'border-l-[3px] border-l-[var(--cm-alert-warning-border)]',
    alert: 'border-l-[3px] border-l-[var(--cm-alert-critical-border)]',
  }[variant]

  const valueColor = {
    default: 'text-[var(--wgi-navy)]',
    warning: 'text-[var(--cm-alert-warning-text)]',
    alert: 'text-[var(--cm-alert-critical-text)]',
  }[variant]

  return (
    <div className={`px-6 py-4 border-r border-[var(--wgi-border)] last:border-r-0
    ${borderClass}`}>
      <div className="text-[10px] font-bold uppercase tracking-[0.1em] text-[var(-
-wgi-text-muted)] mb-1">{label}</div>
      <div className={`font-bold leading-tight mb-0.5 ${valueColor} ${mono ?
'font-mono text-[18px]' : 'text-[22px]'}`}>{value}</div>
      {sub && <div className="text-[10px] text-[var(--wgi-text-light)] font-
medium">{sub}</div>}
    </div>
  )
}
```

Chart color helpers

Replace the current **COLORS** constant in `app/commission/admin/page.tsx`:

```
// lib/commission-chart-colors.ts
export const CM_CHART_COLORS = [
  'var(--cm-chart-1)', // #1B2D45 - navy
  'var(--cm-chart-2)', // #C8A96E - gold
  'var(--cm-chart-3)', // #3D6898 - navy-400
  'var(--cm-chart-4)', // #7B96B2 - slate-blue
  'var(--cm-chart-5)', // #8C7355 - warm brown
  'var(--cm-chart-6)', // #A3B8CC - lightest blue
]

// For gain/loss in KPI charts
```

```
export const CM_GAIN = 'var(--cm-gain)' // #00873E
export const CM_LOSS = 'var(--cm-loss)' // #CC0000
```

Audit log action badges

Replace `ACTION_COLOURS` in `audit-log/page.tsx`:

```
const ACTION_BADGE_CLASSES: Record<string, string> = {
  'commission.approve': 'bg-[var(--cm-status-approved-bg)] text-[var(--cm-status-approved-text)]',
  'commission.reject': 'bg-[var(--cm-status-rejected-bg)] text-[var(--cm-status-rejected-text)]',
  'commission.override': 'bg-[var(--cm-status-advance-bg)] text-[var(--cm-status-advance-text)]',
  'commission.pay': 'bg-[var(--cm-status-paid-bg)] text-[var(--cm-status-paid-text)]',
  'commission.reconcile': 'bg-[var(--cm-status-suspended-bg)] text-[var(--cm-status-suspended-text)]',
  'commission.config_update': 'bg-[var(--wgi-bg)] text-[var(--wgi-text-muted)]',
}
```

Implementation Checklist

1. Add `--cm-*` tokens to `app/globals.css`
2. Add JetBrains Mono to commission layout (or root layout)
3. Apply ag-grid CSS variable overrides — create `app/commission/admin/master-file/ag-override.css` and import it in `master-file/page.tsx`
4. Create `components/commission/StatusBadge.tsx` — replace inline Tailwind badge classes across all commission pages
5. Create `components/commission/AlertBanner.tsx` — replace inline alert divs in `admin/page.tsx`
6. Create `components/commission/StatCard.tsx` — standardise the 4 stat cards in `admin/page.tsx`
7. Replace `COLORS` array in `admin/page.tsx` with `CM_CHART_COLORS` from `lib/commission-chart-colors.ts`
8. Replace `ACTION_COLOURS` in `audit-log/page.tsx` with `ACTION_BADGE_CLASSES` using `--cm-*` tokens
9. Wire commission secondary nav tabs into `app/commission/admin/layout.tsx`
10. IFA portal: apply `max-w-5xl` container + `ifa-balance-strip` 4-card pattern

Anti-Patterns

- Rainbow chart colors `['#3B82F6', '#10B981', '#F59E0B', '#8B5CF6', '#EF4444', '#06B6D4']` → use `--cm-chart-*`
- Tailwind semantic badge classes (`bg-green-100 text-green-800`) → use `--cm-status-*` tokens
- Red/green fill buttons for approve/reject → navy primary, white/red-text destructive
- Floating card shadows on stat cards → flat border only
- Spinner loading states → skeleton loaders
- Blue `--wgi-accent` for admin action buttons → navy `--wgi-navy` only
- Color-coded tabs or nav items by workflow type

Preview

Design system preview: <docs/design-commission-preview.html>

Open in browser to see all three mockups (dashboard, master file, IFA portal), color tokens, typography specimen, and component library.

Decisions Log

Date	Decision	Rationale
2026-06-22	JetBrains Mono for monetary/ID cells	Column alignment is a financial accuracy signal; Bloomberg-grade credibility
2026-06-22	Navy ag-grid header	Signals institutional data system, not a spreadsheet
2026-06-22	Desaturated navy-gold chart palette	Replaces rainbow — charts read as designed, not defaulted
2026-06-22	No sidebar for admin nav	Commission workflows are linear (upload→approve→pay), not hierarchical
2026-06-22	--cm-* token prefix	Commission tokens are additive — scoped to avoid collision with WGI hub and Model Portfolio tokens
2026-06-22	Navy primary buttons (not blue)	--wgi-accent blue reserved for external links; navy avoids false hierarchy against chart series colors
2026-06-22	Reject = white bg + red text (not red fill)	Reject is a secondary action, not the primary CTA; red fill would over-signal danger
2026-06-22	IFA portal max-w-5xl centered	No grid — comfortable reading width for a statement-style view
